

new **ELFIN**
Command and Control

A single source, a double offer. The new "2 COLOR" polarised DC light

New Elfin is pleased to introduce its new 2-COLOR LED light. The most innovative feature of this unit is that it produces, from a single source, light in two different colours; it is easy to imagine the many varied uses of a light unit with double signalling. Moreover, the LED technology guarantees a long life and a substantial energy savings. The 2-COLOR light can be supplied in four different color combinations; it is powered by 24 V. DC.
